PROFILE

After obtaining a master in electronic engineering and a master in computer science, I started working as an HRT consultant (HR software implementation). After seventeen years, I decided to move on to a job where I could combine my creativity, interest in electronics, and programming skills.

In 2021, I enrolled in the Sabbattini stage technician program at De Singel (Antwerp). It quickly became clear that lighting design/lighting technology was my passion. My internship at Ancienne Belgique and work at Trix confirmed my decision to switch to a creative-technical profession focused on lighting. I'm eager to apply my experience and hands-on mentality to the cultural sector and expand my knowledge in the field.

Examples of my work can be seen on my website:
